### New, Non-Condensing Gas Tankless Ultra-Low NOx Models

We are pleased to announce the immediate availability of our new line of Ultra-Low NOx (ULN) compliant non-condensing tankless gas water heaters. These new models are designed to complement our industry leading assortment of fully condensing ULN models and ensure one-stop shopping for all of your tankless needs.

Our new non-condensing models come in a full range of inputs from 140,000 Btu to 199,000 Btu. The product line includes the new ATI/O-110U, ATI/O-310U and the ATI/O-510U models. All three models comply with the stringent 20 parts per million (ppm) Ultra-Low NOx requirements. In addition, the models include the same features as the current Low NOx product line:

- All models have a remote control and factory-installed 6 foot power cord packaged together for indoor models
- Flexible venting options and outdoor models cover all applications. Our new high altitude certifications (up to 8,000 foot elevations) make these units suitable for those markets at higher elevations.
- The ATI/O-510U models are designed for double duty in both residential and commercial applications. They include Easy-Link cables which allow the installer to interconnect up to 4 units and up to 20 units with the multi-controller, covering the most demanding application installations.

These new models combined with our new ULN condensing product provide you the widest range of Ultra-Low NOx compliance products on the market. There has never been a better time to try an A. O. Smith tankless water heater. Call one of our Tankless experts, your local representative or Regional Sales Manager to schedule training on our new full line of condensing and non-condensing tankless water heaters.

Good Selling!
