Updated A. O. Smith Light-Duty Commercial 75G Power Vent and Power Direct Vent Gas Models

We are pleased to announce the launch of the new light-duty commercial Power Vent and Power Direct Vent water heaters.

The new BTF 80 210/211 (PV) and BPD 80 210/211 (PDV) models are now 75G and rated at 76,000 BTU. These new models have a Thermal Efficiency of 81% and are available for both natural gas and propane.

The new models also offer:

- Exclusive blower with front-mounted junction box
- Hot-surface ignition
- 120V electronic gas control
- Sealed combustion system on PDV models
- Certified for ABS, PVC, CPVC and PP (polypropylene) vent material
- Vent lengths up to 125 equivalent feet with 4" diameter venting

Production of the new BPD models has begun, so any orders placed will be for the new models. The current BTF 80 200/201 models are still available. Once inventory is depleted, orders will be fulfilled with the new 210/211 series models.

Information on these new models, including the specification sheet and installation manual, is available online at:

Please do not hesitate to contact me or your A. O. Smith Sales Representative with any questions or for further details.

Sincerely,
