### **Commercial Cyclone Common Vent Option**

The popular Cyclone line of commercial condensing water heaters can now be common vented. This new vent flexibility is achieved using easy to install kits and is available for both PVC and Polypropylene vent.

Some key features and attributes of the common vent system include:

- Allows two water heaters to be common vented with sidewall termination
- Can result in fewer wall cuts reducing install labor
- One kit for each water heater vented with PVC is required
  - o 9009152005 150 – 250 PVC
  - o 9009227005 300 – 500 PVC
- One kit for each water heater vented with Polypropylene is required
  - o 9009132005 150 – 250 Poly
  - o 9009226005 300 – 500 Poly
- Kits include vent adapter/backflow preventer and intake adapter. Other standard vent materials field supplied.
- Maximum equivalent vent run 50 feet
- Direct vent configuration only
- Maximum two water heaters can be common vented

The specification sheet and installation manual for these new kits are available online at [www.hotwater.com](http://www.hotwater.com). Please reference the installation manual for complete details.
