Power Vent Blower Substitution

The blower used on the A. O. Smith (short profile) power vent product family will be changing to a new assembly. The blower assembly will look slightly different but the operations will be the same as the current blower, with no changes to the venting capabilities or installation. This change to the short profile power vent product will begin with production starting the first week of August.

The current blower and the new blower are direct replacements for each other. This allows us to move to the new blower assembly for our replacement parts as well. Since the blowers are interchangeable, the replacement blower part number will remain the same as it is today. You will begin to see the new blower from service parts once the old blower inventory is depleted.

Should you have any questions, regarding this new blower or the replacement of the blower, please feel free to contact me or your A. O. Smith Representative.

Sincerely,

A handwritten signature in cursive script that reads 'Cliff Deidiker'.
