

DATE: August 21, 2015

NUMBER: AOSRE10015

A O Smith is making changes to our tabletop line of residential electric water heater models. As a result of design changes and manufacturing consolidation, the current tabletop model ESTT-40 is replaced with new model ENTT-38. Exterior dimensions of the product will remain the same at 36" height, 24" width, and 25" depth, with a shipping weight of 150 lbs. The new model is rated at 38 gallons, and has a first hour delivery of 45 gallons.

Value added features include dual 4500W elements – a copper upper and durable Incoloy lower element, to match our other ProMax models. The product is built with a polyester insulating blanket inside, instead of polyurethane foam and steel, resulting in a reduction in weight. A durable enhanced flow brass drain valve and factory installed T&P valve are included.

Our tabletop models are available with 6-year tank/parts warranty, and come standard with Aluminum anode for tank protection. (Mg or KA90 anode options are available)

Product specifications are listed below:

Model	Rated Capacity (gal)	Energy Factor	Standard Voltage	Upper Element	Lower Element	Width x Depth (in)	Height (in)	Shipping Weight (lbs)	Hi Cube Trailer Load Factor
ENTT-38	38	0.88	240	4500W Copper	4500W Incoloy	24 x 25	36.00	150.00	0.69

This new model is included in the attached spec sheet. There is no change in price from the former model to the new model.

Should you have any questions on this, please contact your regional sales manager or myself.

Thanks for being a valued A O Smith customer.

Regards,
Bill Hewa
