New 75 Gallon Commercial Cyclone Xi High Efficiency Direct Vent Water Heater and Existing BTX Model Enhancements

We are pleased to announce the launch of the new commercial 75 gallon Cyclone Xi high-efficiency direct vent water heater. With 75 gallon storage and 100,000 Btus input this new design is perfect for light to mid duty commercial applications needing quick recovery and enough storage to meet the demand. The new BTXL-100 model is rated at an impressive 96% thermal efficiency. This efficiency level delivers significant energy savings resulting in a short payback period. The new footprint and 75 gallon storage make this the perfect high-efficiency option for quick serve restaurants and many other commercial applications. This new model is available for order now.

In addition to the new 75 gallon model, the existing 50 gallon BTX-100 has been enhanced and now features a redesigned combustion system incorporating direct spark ignition. The new design BTX-100 model will change to Series 130/131. These new series models will be supplied once inventory of the current series models is depleted.

The specification sheet and installation manual for these new models are available online at www.hotwater.com.

Please do not hesitate to contact me or you're A. O. Smith Sales Representative with any questions or for further details.
